CRANIAL REMOLDING HELMET

A cranial remolding helmet, or orthosis, is a device used to correct an infant's flat or asymmetric head shape. Helmet treatment is effective in infants from 3-18 months of age, but optimal when started young. Skull growth is guided by the helmet to gently correct the shape.

Benefits of the smooth surlyn plastic:

- Less skin irritation or rashing
- Less odor
- Easier cleaning
- Thin material reduces strain on the baby's neck
- Easier to put on the baby
- Can be decorated with paint or stickers to personalize

“

The clear plastic allowed me to see Joey's skin, which put my mind at ease. I started to notice improvements after just two weeks!

”
